

# One Platform. Every Project. Every Team.

Production-grade project management for operations teams who can't afford guesswork.

## The Problem with "Good Enough"

Most project management tools were built for software teams — not for operations managers running physical workflows, field teams, or production environments.

The result? You're managing production with a patchwork of spreadsheets, generic task boards, and manual time tracking — while your margins, your pace, and your client relationships suffer.

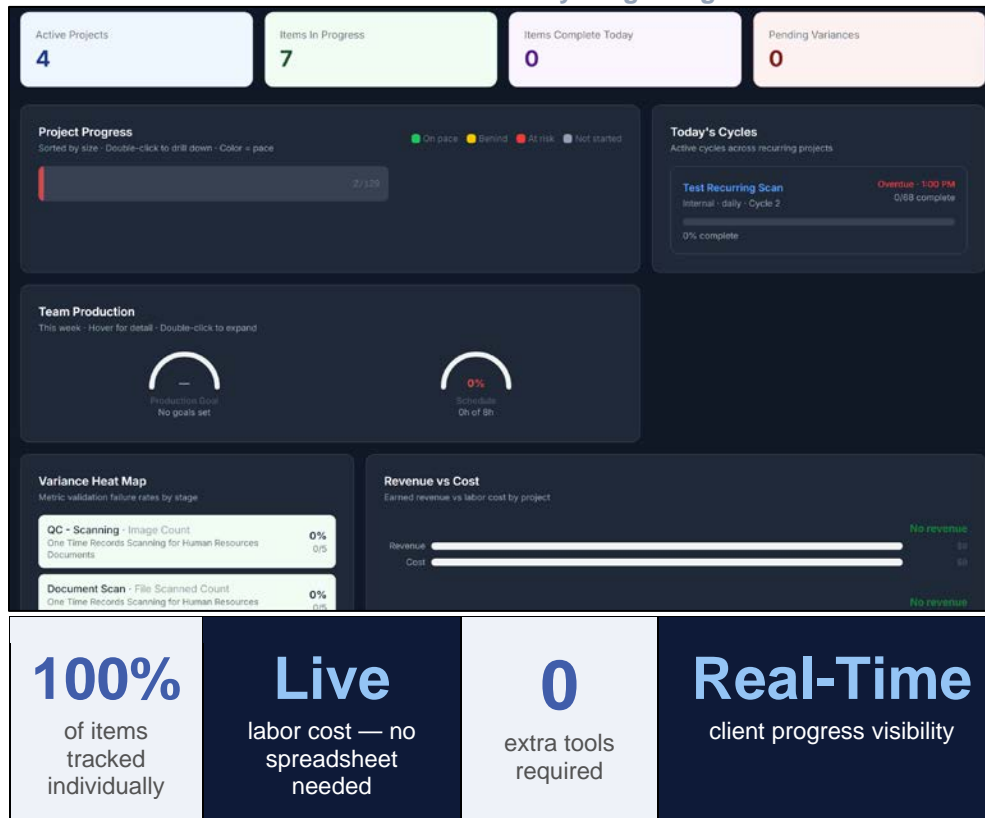

### Sound familiar?

- You don't know if you're on pace until it's too late.
- Labor costs are estimated, not measured.
- Clients ask for updates you don't have time to pull.
- Exceptions and rework go untracked until they become problems.

## Kribble gives you back control.

	Real-time production pace vs. plan
	Automated labor cost from every task
	Item-level tracking through every stage
	Client visibility without extra work

## LIVE DASHBOARD — Everything at a glance

**100%**  
of items tracked individually

**Live**  
labor cost — no spreadsheet needed

**0**  
extra tools required

**Real-Time**  
client progress visibility

# Built Around How Your Team Actually Works

Kribble adapts to your workflow — not the other way around.

## Configurable Workflow Stages

Define exactly how work moves through your organization. Every item follows your workflow — tracked, timed, and logged at each stage.

### Workstation Teams

For operations with physical stations, scanning equipment, or field teams. Workers authenticate with a PIN at their station, scan item barcodes, and log task time automatically.

- QR code workstation authentication
- Barcode & camera scanning on any device
- Auto-calculated labor cost per task
- Exception flagging and rework routing

### Virtual Teams

For project managers and teams that work on tasks remotely or in-office without physical scanning. Create tasks, assign them, and track completion through a project board interface.

- Kanban and board-based task management
- Task assignment and team visibility
- Progress tracking per project
- No scanning hardware required

*“Every project manager should have one application — one place where pace, cost, quality, and client communication live together.”*

— The Kribble Philosophy

## Built for Recurring Operations

Some operations never have a single end date — daily pickups, weekly processing cycles, monthly deliverables. Kribble's recurring project engine tracks each cycle independently with its own deadline, item list, and completion status, while giving management a single view across all active cycles.

# Everything You Need. Nothing You Don't.

	<b>Real-Time Production Pace</b> Track required items per day vs. actual items per day for every active project. Color-coded pace indicators tell you immediately which projects are on track and which need attention — before it's too late to recover.
	<b>Automated Cost &amp; Margin Tracking</b> Every task event automatically generates a labor cost entry based on logged time and each worker's hourly rate. Combined with vendor invoices and project costs, Kribble shows your real margin on every project — live.
	<b>Barcode &amp; Camera Scanning</b> Workers use any smartphone or workstation browser to scan item barcodes using a physical scanner or the built-in camera scanning feature. No proprietary hardware required.
	<b>Exception &amp; Rework Routing</b> When an item fails QC, workers flag it and Kribble automatically routes it to the configured rework stage. The variance heat map on the dashboard shows exactly where quality issues are concentrated.
	<b>Client Portal &amp; Approvals</b> Share a secure, no-login link with your client showing real-time project progress. For operations requiring client sign-off, Kribble generates digital approval requests with timestamp and IP capture.
	<b>Billing &amp; Revenue Recognition</b> Define contracted billing lines (per unit, hourly, or flat fee) and Kribble automatically calculates earned revenue as production milestones are reached. No manual billing reconciliation.
	<b>Enterprise-Ready Security</b> Role-based access controls, MFA, configurable session timeouts, audit logging, and HIPAA mode for healthcare clients. Hosted on AWS in the United States.

## Who Kribble Is Built For

If your organization manages production workflows, field teams, or multi-stage operations — Kribble was designed for you.

### Project Managers

One place for all your projects, teams, and client communication. Less time reporting, more time managing.

### Operations Directors

Real-time visibility into pace, cost, and quality across all active operations — without waiting for end-of-day reports.

### COOs & Executives

Margin visibility, revenue recognition, and operational performance data — available the moment production happens.

## Plans That Scale with You

### Light

1 User

Getting started

### Starter

Up to 5

Small teams

### Professional

Up to 15

Growing operations

### Enterprise

Unlimited

Full-scale ops

## Ready to See It in Action?

Talk to us about your workflow and we'll show you exactly how Kribble fits your operation.
